# About

As a Digital Product Designer, my 14+ year journey spans across startup and corporate design teams. I specialize in crafting impactful user experiences that enhance business outcomes. I am skilled in collaborating with a spectrum of stakeholders, bridging gaps between clients and software development teams to transform ideas into refined digital products.

Photography and travel fuel my inspiration, continually offering fresh perspectives that enrich my work.

UX Case Study 1:

# Transforming a Design Team for the AI Era

OVERVIEW

CHALLENGES

PROCESS

OUTCOME

WORK SAMPLE

## Details

When I joined the UX team, I quickly realized that improving design quality required more than better interfaces - it required transforming how the team worked. Designers operated with different workflows, development teams had limited visibility into design decisions, and Agile ceremonies often treated design as a separate activity rather than an integrated part of product delivery. Over the next five years, I focused on building a mature design practice. This began with standardizing our workflow, introducing a scalable design system, strengthening collaboration with developers and product teams, and encouraging designers to take greater ownership of their work. As Artificial Intelligence became a practical part of product development, this strong foundation enabled us to embrace AI with confidence. Rather than replacing creativity, AI became a tool that accelerated research, exploration, documentation, and iteration.

## Role

UX Lead

## Tools

Figma, Adobe XD, Mural, Microsoft Copilot, Google Gemini

## Scope of work & duration

Design Team Transformation • AI Enablement • Design System • 5+ Years

*“AI won’t replace designers.  
Designers who know how to work with  
AI will replace those who don’t.”*

UX Case Study 1:

# Transforming a Design Team for the AI Era

OVERVIEW

CHALLENGES

PROCESS

OUTCOME

WORK SAMPLE

## Inconsistent design practices

Designers followed different workflows, resulting in varying quality, duplicated effort, and inconsistent experiences across products.

## Limited ownership

Designers focused primarily on producing screens instead of taking ownership of product outcomes, implementation quality, and delivery.

## Disconnected Agile collaboration

Design, development, and product teams worked with different expectations, reducing participation in sprint planning, estimation, and technical discussions.

## Uncertainty around AI

While AI tools were becoming increasingly capable, designers were unsure where AI could genuinely improve their work and where human creativity remained essential.

## Preparing for the future

Beyond introducing new tools, the challenge was to build a culture that embraced continuous learning and adapted confidently to rapidly evolving technologies.

*An audit of five product teams revealed 750+ unique UI elements, fragmented workflows, and inconsistent design practices—highlighting the need for both standardization and future-ready ways of working.*

UX Case Study 1:

# Transforming a Design Team for the AI Era

OVERVIEW

CHALLENGES

PROCESS

OUTCOME

WORK SAMPLE

## Standardizing the design practice

The transformation began by documenting and refining our design workflow. We introduced consistent design processes, shared review practices, reusable assets, and established a scalable design system that reduced repetitive work and improved consistency across products.

## Building product ownership

Designers were encouraged to move beyond creating interfaces. They became active contributors throughout the product lifecycle by participating in requirement discussions, validating solutions with stakeholders, and ensuring implementation quality alongside development teams.

## Strengthening Agile collaboration

We increased designer participation in Agile ceremonies including backlog refinement, sprint planning, estimation, and retrospectives. This improved their understanding of technical constraints, development priorities, and delivery timelines, enabling more practical design decisions.

*The design system, backed by a Bootstrap (v4.5) component repository, became the foundation for standardized workflows and later enabled AI-assisted design processes across the team.*

# Transforming a Design Team for the AI Era

## OVERVIEW

## CHALLENGES

## PROCESS

## OUTCOME

## WORK SAMPLE

Rather than treating AI as another design tool, we explored where it could provide the highest value. We established practical workflows for research synthesis, brainstorming, content generation, documentation, accessibility reviews, design critiques, and rapid prototyping while reinforcing that creativity, product thinking, and user empathy remain human strengths.

As confidence grew, AI became a natural extension of the team's workflow. Designers learned how to write effective prompts, evaluate AI-generated outputs critically, and combine AI-assisted efficiency with original thinking, enabling faster execution without compromising quality or innovation.

*Integrated AI into everyday design workflows, accelerating research, ideation, documentation, and iteration while preserving human creativity and critical thinking.*

# Transforming a Design Team for the AI Era

OVERVIEW

CHALLENGES

PROCESS

OUTCOME

WORK SAMPLE

Established a standardized design practice that improved consistency, collaboration, and delivery quality across multiple products.

Built a stronger sense of ownership, enabling designers to contribute confidently beyond visual design into product strategy and implementation.

Improved collaboration between UX, Product, and Engineering by aligning design activities with Agile development practices.

Successfully integrated AI into the team’s everyday workflow, reducing time spent on repetitive tasks while allowing greater focus on creative problem-solving.

Created a culture of experimentation and continuous learning, preparing the design team to confidently adopt future AI capabilities as they continue to evolve.

*Standardized workflows, stronger design ownership, and AI-assisted practices reduced Time to Market (TTM) from weeks to days while improving delivery quality and team efficiency.*

- WORK SAMPLE

As UX Lead for TCS Empowers, I focused on transforming the maturity of the design team rather than delivering a single product. Over five years, I established standardized workflows, introduced a scalable design system, strengthened collaboration with Agile teams, and guided designers in adopting AI responsibly. Today, AI supports our everyday design process - from research and ideation to documentation and reviews - allowing the team to work more efficiently while preserving originality, critical thinking, and user-centred design.

Note: Internal workflows, AI practices, and design system assets developed for TCS are protected under non-disclosure agreements and cannot be shared publicly.

UX Case Study 2:

# Joint Application Design (JAD) for making a Cloud Analytics Platform

OVERVIEW

CHALLENGES

PROCESS

OUTCOME

WORK SAMPLE

## Details

During my time at one of the Big Four firms, I had the chance to dive into exciting projects alongside an energetic cross-functional team. From Minimum Viable Products (MVPs) to fully-fledged production-ready applications, I played a key role as a User Experience Architect, collaborating closely with both clients and software development teams.

The auditing applications, coming from different teams and platforms, were crucial for core auditing functions of the corporate. The Global Analytics Platform project aimed to bring all these diverse applications together, creating a unified ecosystem to streamline operations on a single platform.

## Role

User Experience Architect

## Tools

Adobe XD, Axure RP, Mural, Abstract

## Scope of work & duration

Web application, 3 Years

*In JAD, UX voiced the user, guiding the development process.*

UX Case Study 2:

# Joint Application Design (JAD) for making a Cloud Analytics Platform

OVERVIEW

CHALLENGES

PROCESS

OUTCOME

WORK SAMPLE

## Establishing digital product style

At the project's start, we lacked a designated design system or UI/UX style guide for digital products, relying solely on marketing guides. As the project evolved, integrating globally developed design components greatly improved and unified our design process.

## Setting future standards

With the concept of a novel platform and applications, our designs needed scalability for forthcoming applications in this ecosystem.

## Adapting design tools

We began with Axure RP, creating highly realistic prototypes. However, due to collaboration limitations, we later shifted to more versatile tools like Invision, Adobe XD, and Abstract. These tools improved sprint version management and fostered better collaboration within the team.

*We picked UX tools based on the outputs we needed to validate with clients. When new UX tools came along, integrating them into our workflow made everything smoother and more efficient.*

# Joint Application Design (JAD) for making a Cloud Analytics Platform

OVERVIEW

CHALLENGES

PROCESS

OUTCOME

WORK SAMPLE

## Orchestrating design workshops & idea generation

Kicking off our project, we dove into Joint Application Design (JAD) sessions, bringing together clients, project management, design, and development teams. These sessions were pivotal in discussing requirements, exploring ideas, and identifying challenges. Crafting User Personas and mapping their journey through User Journeys gave us a visual roadmap of the user experience. We kept refining these personas and journeys, welcoming input from all stakeholders, which greatly enriched our understanding.

## Collaborating within a dynamic team

To drive the project forward, we formed a dedicated cross-functional team overseeing design, development, and deployment. Keeping pace with the project's speed, we meticulously aligned our design process and deliverables with the rapid development strides.

Pre-workshop

### Preparation

- Discover - define - ideate - create
- User persona & User journey
- Lo-fi Wireframes

Design Workshop

### Workshop

- Validate User persona & User Journey
- Validating Hi-fi Wireframes
- User story formation with Hi-fi wireframes
- Development planning with wireframes

Development

### Sprint Start

- Hi-fi designs creation and review
- Sending UX deliverables for development
- Review developed screens
- User testing developed screens

### Sprint End

# Joint Application Design (JAD) for making a Cloud Analytics Platform

OVERVIEW

CHALLENGES

PROCESS

OUTCOME

WORK SAMPLE

## Creating wireframes & prototypes

Working closely with Business Analysts (BAs), I translated detailed business requirements into wireframes and interactive prototypes for client validation. These wireframes became foundational, aligning both business and development teams. Informed by requirement insights, we crafted conceptual designs and user flows, using interactive prototypes to spark discussions and refinements.

## Design integration with development

Structuring the User Interface (UI) based on approved wireframes, I collaborated with the business team for iterations. Leveraging *Abstract* for version control, *Azure DevOps* became our central hub for managing projects, ensuring seamless collaboration among clients, BAs, development, and design teams.

*Starting JAD sessions at the beginning of the development cycle not only sped up our progress but also allowed our UX team to craft applications by directly collaborating with our clients.*

The **GL Analyzer**, an integral component of the global audit analytics platform **Helix**, specializes in examining and analyzing general ledger (GL) journals of any size. Initially, GL Analyzer featured both desktop and cloud versions. This project focused on consolidating GLA into a single analyzer, designed for deployment as an application on the Global Analytics-Helix platform. As the **UX Architect**, my responsibilities included understanding client business requirements, creating and validating user personas and journey maps, and designing applications such as the data preparation tool and GLA web app.

# An Immersive User Journey in Figma

OVERVIEW

CHALLENGES

PROCESS

OUTCOME & WORK SKETCHES

## Details

The **Data Product Market Place (DPM)** was more than a digital storefront, it served as a hub connecting consumers, producers, and the governance of data products. Imagine it as an online supermarket where users could effortlessly browse through diverse data products, explore details, and download what they needed.

Beyond the standard web platform, the client sought to add an interactive demo, a hands-on experience for anyone to grasp the essence of DPM.

## Role

UX Architect

UX Case Study 3:

# An Immersive User Journey in Figma

OVERVIEW

CHALLENGES

PROCESS

OUTCOME & WORK SKETCHES

## User-Friendly Exploration

Our mission was to simplify the intricacies of data products, likened to strolling through supermarket aisles. The interactive demo helped the users, allowing them to click on marked elements and seamlessly explore the interconnected flows, revealing the concepts behind data products.

## Creativity Meets Functionality

Selecting the right medium and tool was the first challenge. Initially while considering making the presentation as a video, we realized it would be too linear, depriving users of control. The decision to leverage the auto-animate feature in the interaction design tools led us to choose Figma. Its ability to manage a large number of assets and generate a unique URL for universal accessibility made Figma the ideal platform.

## Speed and Scalability

Real-time updates on the shared URL through Figma turned out to be a game-changer. Using components for illustrations not only gave us control but also facilitated speedy iterations, aligning perfectly with our need for efficiency.

*Choosing to create a video was the conventional approach, but with a tight timeline that couldn't accommodate a full-scale animated production, it felt like trying to squeeze a marathon into a sprint. Moreover, our screenplay and content evolved iteratively, prompting the need for a more inventive and efficient delivery method.*

UX Case Study 3:

## An Immersive User Journey in Figma

OVERVIEW

CHALLENGES

PROCESS

OUTCOME & WORK SKETCHES

### Figjam Brainstorming

Starting with the client's outline, our collaborative Figjam brainstorming sessions shaped the presentation's style. Isometric figures emerged as the perfect fit, complemented by assets from Adobe Stock to weave a visually compelling narrative.

### Storyline Evolution

Creating the entire presentation in Figma brought forth a new approach, prompting the storyline to evolve. What began as a simple demo blossomed into a multifaceted experience with multiple storylines. Users became the navigators, triggering diverse developments by guiding the main characters through different zones, akin to a video game.

### Sketches to Figma Magic

The scene was set through rough sketches, refined into illustrations, and seamlessly integrated into Figma. Each illustration, treated as a component, became part of our interactive digital supermarket.

*The isometric vector graphics from Adobe Stock played a crucial role in achieving the aesthetics found in illustrated books. Simultaneously, their versatility allowed us to tailor them precisely to meet our specific needs.*

UX Case Study 3:

## An Immersive User Journey in Figma

OVERVIEW

CHALLENGES

PROCESS

OUTCOME & WORK SKETCHES

The final outcome was an entirely Figma-made interactive presentation. The shared URL served as the portal, with each zone tailored for specific user personas, visualizing related items. Users could immerse themselves, directing the persona through their designated zone, unlocking diverse storylines—an engaging digital adventure within the realm of data products.

In my role as a **UX Architect**, I collaborated closely with clients to comprehend their requirements, fine-tuning their narrative, and exploring novel approaches for delivering an exceptional user experience.

VIEW DETAILS ↗

**Details**  
Working in Dubai for five years amplified my involvement in enhancing the expanding digital footprint of Government entities in the UAE. Throughout this period, my design contributions included mobile apps, websites, kiosk UI, and marketing materials.

Designing for the Middle East demanded a deep understanding of regional design trends and specific needs, notably catering to multi-language support. My time in Dubai afforded me the opportunity to craft applications across various rapidly evolving mobile platforms. Within the team, I played a pivotal role in advancing our design process by introducing and integrating new tools and techniques.

United Kerala

VIEW DETAILS ↗

Details

Growing up in Kerala, nestled in the southern part of India, offered a glimpse into its rich history. However, in this project, the aim was to diverge from the norm and reimagine an alternate history where Kerala stood as an independent country rather than just a state within the Union of India. The goal was to spark a reevaluation among Keralites, highlighting the region’s untapped potential and its often-overlooked history.

Noticing a lack of awareness among many, especially millennials, about this local history, there was a need to reconstruct maps and craft a compelling narrative to introduce fundamental concepts. Understanding the power of visuals in conveying complex ideas, I carefully planned and visualized various scenarios crucial to the storyline

Branding & Illustration

Details

*Sometimes a book can be judged by its cover,* if the branding is done right.

For me, branding breathes life and character into everything, no matter the size – whether it’s a company, an app, an event, or a cause. It’s about creating a visual and communicative identity that resonates and is understood and embraced by both creator and audience. Crafting a brand for an organization involves design elements and customer interactions, while in the digital realm, the essence of branding largely resides in interface design and user experience. These aspects are crucial in defining and molding how the brand is perceived in the digital world.

# Story Telling with Animated Video

WATCH VIDEO ↗

### Details

Creating *One in a Billion* was a journey to shed light on corruption. The title reflects the idea that in India's vast population, an individual might feel insignificant among billions. However, the video aims to show how each person's actions hold immense power in shaping society. It's about highlighting the ripple effect of individual actions on the collective fabric of society.

I crafted a storyboard with simple sketches, mapping out the narrative. Then, in Premiere Pro, I brought these sketches to life, adding descriptions to animate the storyline. Simple illustrations have always been my go-to for clear and impactful communication.

### Role
